ABOUT THIS EXAMPLE

A Sample Web Walkthrough

This is the web-platform run of the same demo shown in the repo's mobile example – same fictional brand, same app-walkthrough skill, a different frame around the output because platform: "web" was set in script.json.

- Landscape 1920x1080 video with a browser-chrome mockup instead of a phone frame
- This PDF uses a wide browser frame stacked above the copy instead of a narrow phone frame beside it

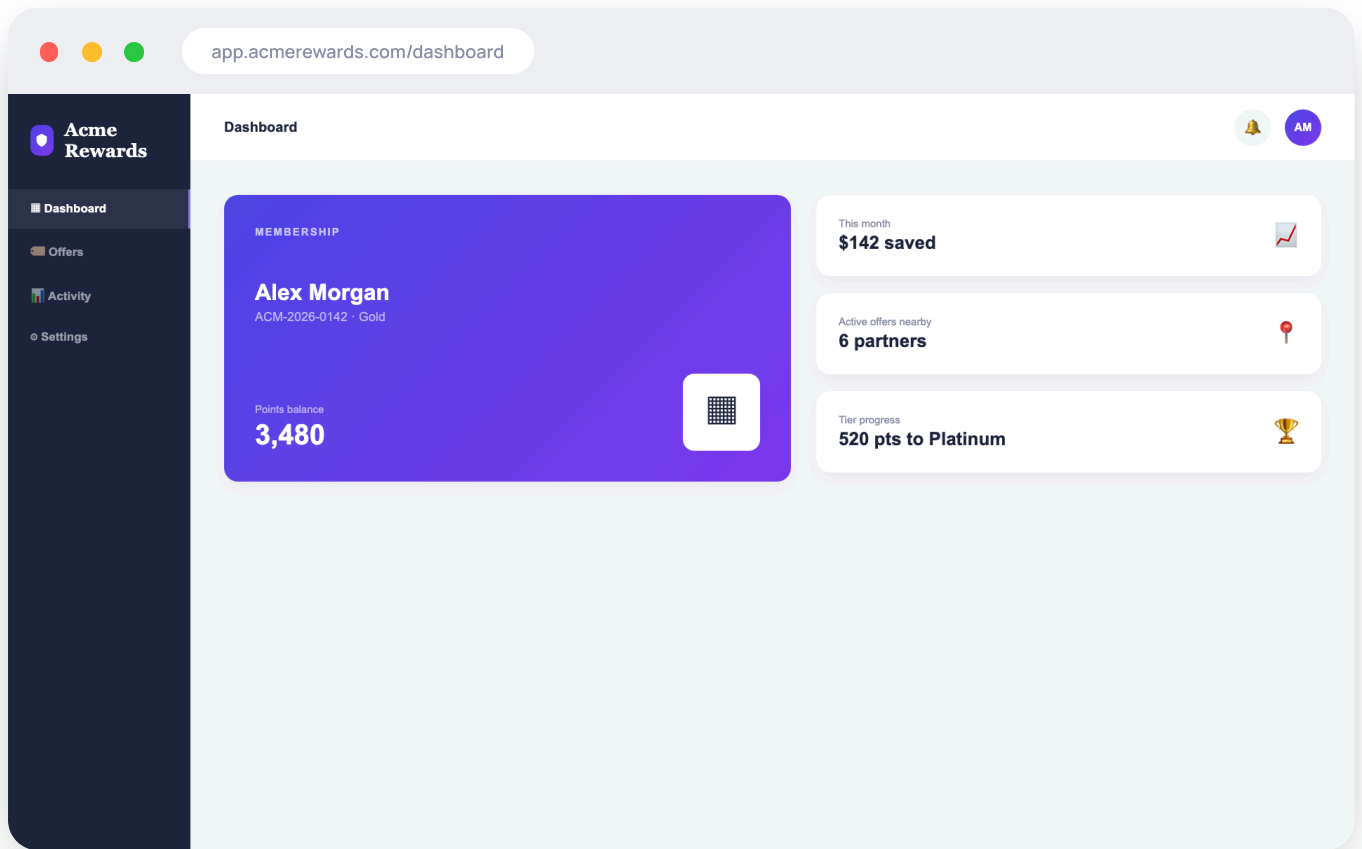

02 / 06

MARKETING SITE

The First Impression

The homepage leads with one clear value statement and a single primary call to action, reachable before any sign-in.

- Secondary CTA for visitors who want to learn more before committing

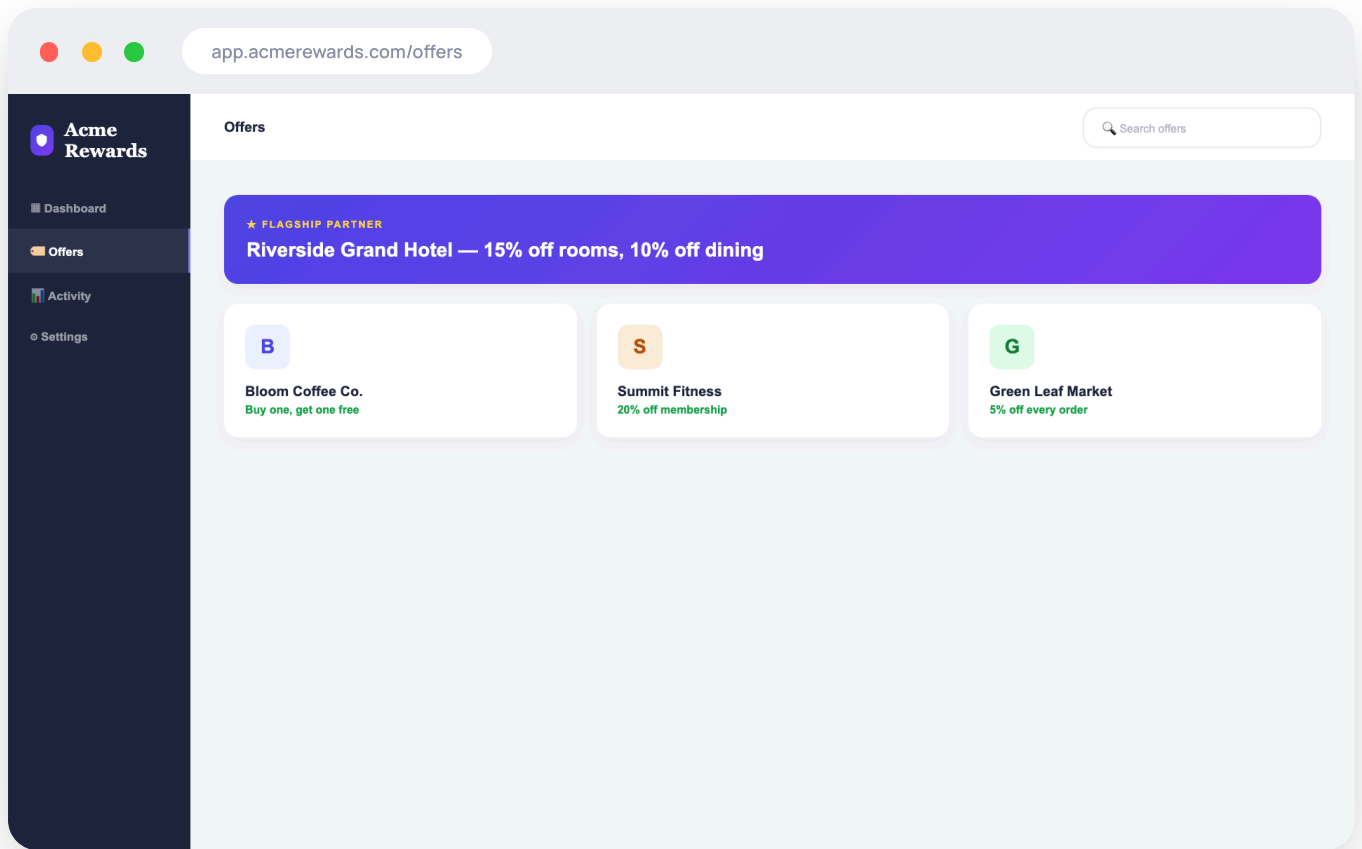

03 / 06

WEB APP

Everything at a Glance

The signed-in dashboard surfaces membership status, points balance, and progress toward the next tier in one view.

- Sidebar navigation persists across every authenticated page

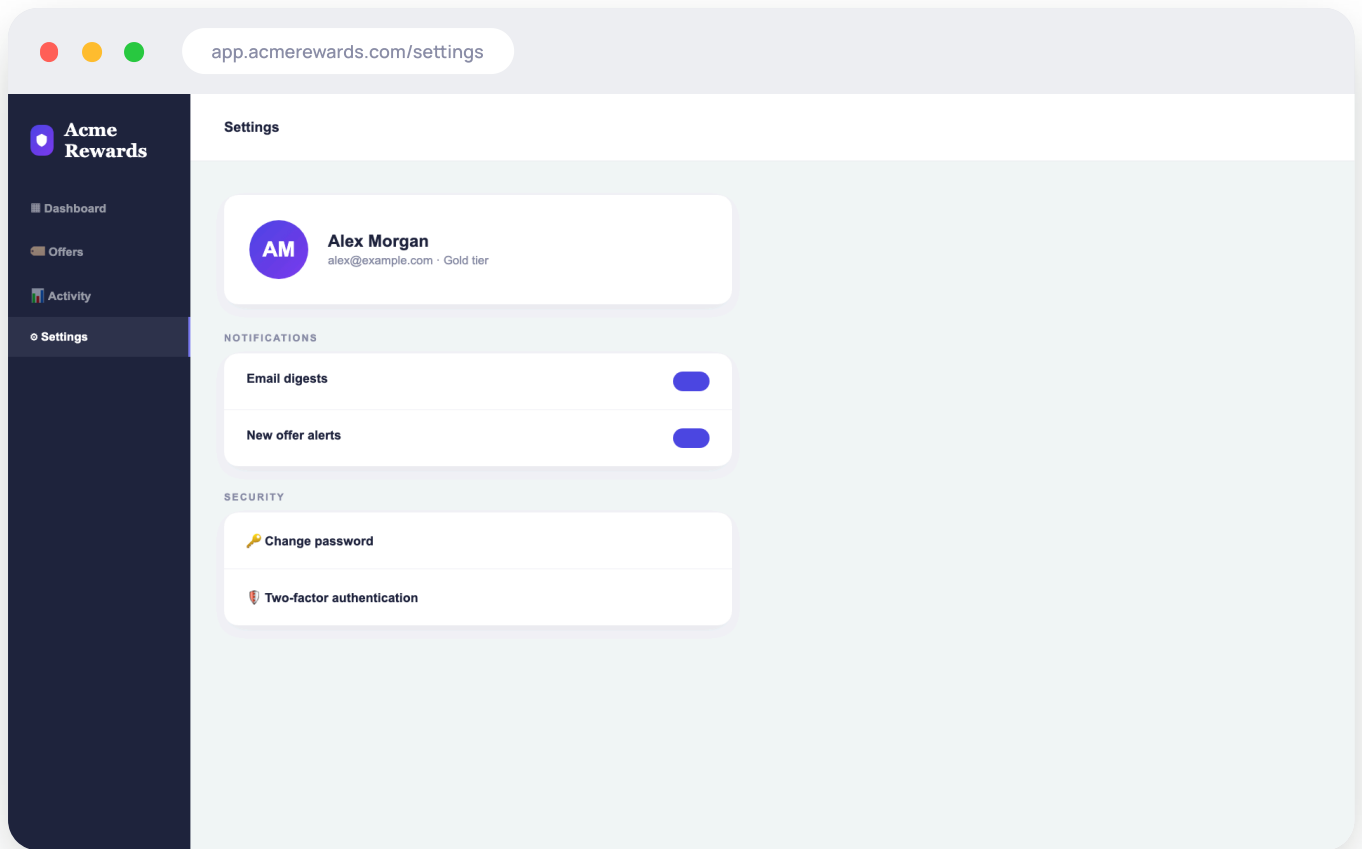

04 / 06

PARTNER NETWORK

Every Partner, Searchable

A searchable grid of every active partner discount, with the flagship partner pinned above the rest.

- Same underlying data model as the mobile app's Offers tab

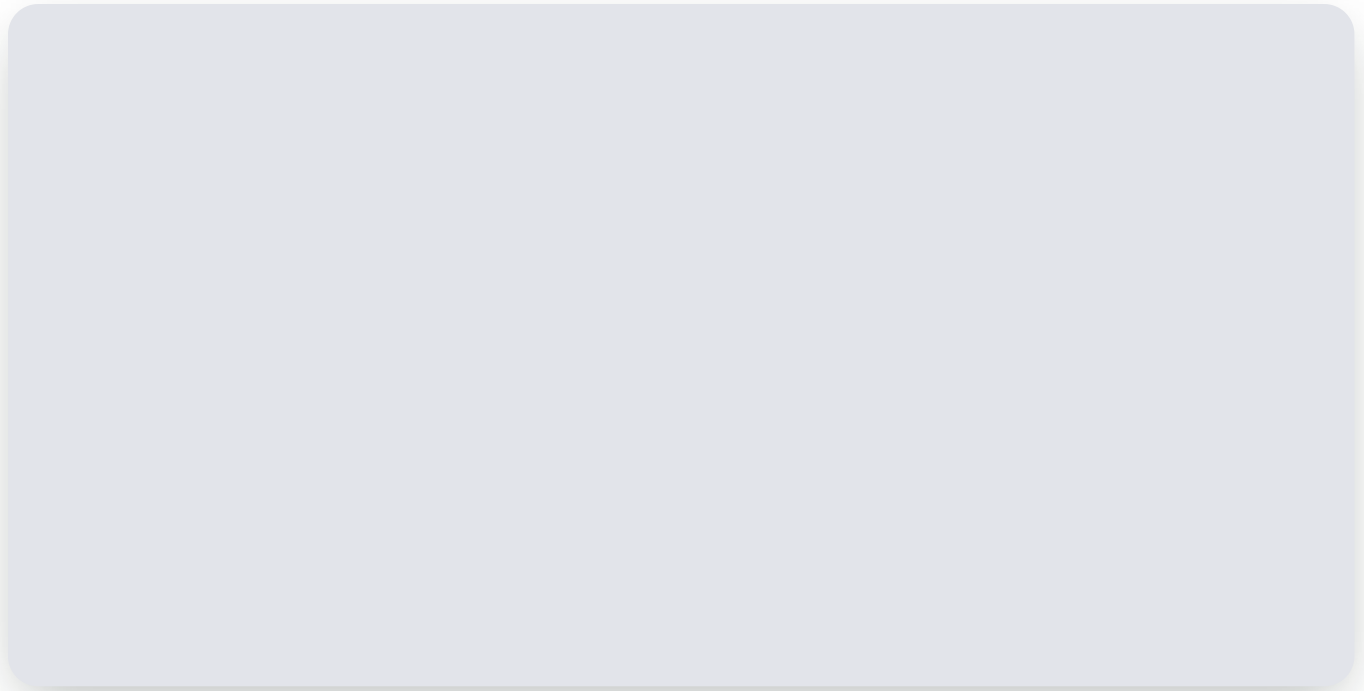

05 / 06

ACCOUNT

Notifications and Security

Notification preferences and account security, including two-factor authentication.

- Consistent with the mobile app's Settings screen, adapted to a web layout

06 / 06

TRY IT YOURSELF

Same Skill, Any Platform

Point the app-walkthrough skill at your own website or web app to generate the real thing — set platform: "web" in script.json and everything else follows automatically.

- See the skill's README and SKILL.md for setup

Thank you

This guide covered every major screen in Acme Rewards, from first launch through everyday use — the digital card, the partner network, profile & history, settings, and the offline-verifiable insurance pass.

EVERY VISIT, REWARDED.
